

Hervé Tribouilloy

Solutions Architect – Platform Modernisation & Distributed Systems

Helping organisations reduce friction and complexity to increase delivery velocity.

Poole, England, UK | French & English

Professional Overview

Solutions Architect and Senior Engineer with 15+ years of experience evolving complex commerce platforms and distributed systems.

Specialised in reducing complexity and delivery friction by introducing clear system boundaries, enabling established platforms to evolve incrementally without disruptive replatforming.

Recent work combines distributed services, progressive frontend modernisation, deployment automation, observability, and AI-assisted engineering practices to improve release confidence and delivery velocity.

Key Skills

Platform Modernisation & Incremental Evolution	Engineering Quality & Automated Testing
Distributed Systems & System Boundaries	CI/CD & Deployment Automation
API Architecture & Integration	OpenTelemetry & Observability
Domain-Driven Design (DDD)	OAuth2 & Secure Identity

Professional Experience

Commerce Engineer (Magento) – Trespass June 2025 - Nov 2025

- Modernised the Product Detail Page (PDP) architecture across 3 international storefronts, delivering 5 new core capabilities (video, gallery, size guides, and delivery info) without impacting production stability.
- Improved platform search visibility and technical SEO by implementing comprehensive JSON-LD structured data across the entire site.
- Enhanced Product Listing Pages (PLP) with new FAQ functionality, improving content depth and user engagement.

Technologies: Magento 2, PHP, Docker, Nginx, Varnish, JSON-LD

Independent Solution Architect April 2024 – June 2025
Dec 2025 – Present

Designed and implemented modernisation strategies enabling established commerce platforms to evolve incrementally while reducing the cost and risk of change.

phone: 07850074505

email: herve@reactedge.net

- **Reduced the dependency on full-platform releases** by enabling five customer-facing capabilities to be developed, tested and deployed independently from the Magento application.
- **Reduced the testing surface of frontend changes** by giving each isolated capability its own Playwright end-to-end validation, consistent across local and deployed environments.
- **Enabled independent backend services** by designing Node.js and TypeScript APIs using REST, GraphQL and OAuth2.
- **Improved diagnosis across distributed components** by introducing OpenTelemetry tracing spanning Magento, Node.js and React application boundaries.
- **Accelerated the creation of new capabilities** by defining architectural conventions that allow AI-assisted workflows to scaffold UI components together with their end-to-end tests.
- **Reduced coupling between platform capabilities** by applying domain-driven design and explicit boundaries, allowing components to be understood, tested and evolved independently.
- **Developed AI-assisted engineering workflows using MCP**, enabling agents to discover platform capabilities, validate component structure and scaffold new user interfaces with associated end-to-end tests.

Technologies: PHP, Node.js, TypeScript, React, GraphQL, OAuth2, OpenTelemetry, Docker

Backend Engineer / Solution Architecture – CTI Digital Ltd

Jan 2023 - April 2024

- Contributed to the modernisation of the McGraw Hill Magento Commerce platform as part of a large-scale PWA transformation programme.
- Enabled 2x growth in catalogue size (to 500K+ SKUs) without performance degradation by implementing event-driven integration with RabbitMQ.
- Developed backend services and platform enhancements supporting high-volume commerce operations.
- Collaborated within a distributed engineering team delivering enterprise ecommerce solutions.

Technologies: Magento Commerce, PHP, RabbitMQ, Docker, Cloud Infrastructure

Education

MSc Information Technology — Coventry University

BSc Mathematics — Université de Reims

TOGAF® 10 Foundation — The Open Group (2025)

phone: 07850074505

email: herve@reactedge.net

Earlier Experience (2000-2022)

- Event-driven ERP integrations
- PWA backend architecture
- Large-scale ecommerce migration initiatives
- API-led commerce integrations
